

“Transverse” Data in SDA

M Church

original 6/30/03

updated 7/9/03, updated 7/25/03, updated 8/24/03

Data included here are BPMs, SEMs, BLTs, FWs, CPMs, Synch Lite, Schottky monitors, dipole correctors, dampers, collimators, and CDF SVT. BPM data only accessible through T39. Only sigmas, emittances, and freshness variable are listed for Tev FWs. (Goodness of fit, centroid, or amplitude parameters are read by SDA but not listed in this table.) **All BLT data still in confused state. MI BPM data is not yet getting into SDA correctly.**
